CONCRETE[®] SOLUTIONS

PLASTIC

Mortar plastificant

OUTDOOR

CHLORIDE - FREE
MATERIAL

DOSE

Ready to use product. It is added into the mixing water at a ratio of: in mixer: 0.1 to 0.2% in weight for any type of cement (100 to 200 cm³ per 100 kg of cement).

Manual mixing: 0.2% to 0.4% in weight for any type of cement (200 to 400 cm³ per 100 kg of cement).

FEATURES AND USE

- Red-brown liquid.
- It makes mortars workability easy: plasters, mortars, etc.
- Plasticizing and aerating effects makes binders (lime, gypsum, cement) be humidified and cohesionated.
- It produces freezing resistance.
- It reduces water consumption.
- It avoids a quick absorption of water into substrates, improving adhesion to them.
- Storage: 12 months into their original containers.
